EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

On page 1 of the Specification, after the title, the following sentence has been inserted:

--This application is a continuation of U.S. Application Serial No. 09/857,217, filed 10/15/2001, now U.S. Patent No. 6,666,953, which is a 371 of PCT/IB99/02049, filed 12/24/1999. --

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1, 3, 5-7, 9-13, 16-21, 24-28, 37-45 and 67-70: The nearest prior art, Passaretti, teaches treating natural or precipitated calcium carbonate CaCO_3 with at least 0.1% phosphoric acid, based on the amount of CaCO_3 , and a chelating agent, but the product has an acidic equilibrium pH. In comparative examples wherein the chelating agent is not used, the pH rises to above 8; however, the maximum amount of acid used is 6% based on CaCO_3 , and 2% where natural CaCO_3 is used, which are significantly below the claimed amount. Passaretti requires an acidic product, and the

claimed combination of amount of acid used and final pH are not obvious thereover. Other prior art (5593488 and 6228161) discloses similar processes and acid stable CaCO_3 compositions, all of which are acidic. Other prior art (5505819 and 6540870) discloses using CO_2 to stabilize CaCO_3 compositions at a pH in the claimed range, but the claimed medium strong to strong acids are not disclosed, nor would their use have been obvious. The claimed compositions and processes of treating fillers comprising CaCO_3 are thus neither anticipated nor obvious to one of ordinary skill at the time of the invention. In addition, Brown (5676746) teaches that precipitated CaCO_3 , in particular the scalenohedral form, is known to provide bulk to paper, but the rhombohedral form, which is characteristic of natural CaCO_3 , is not expected to enhance the bulk of paper (col 2, lines 60-64; col 3, lines 15-17 and 26-40; col 5, lines 46-60). For this reason, it would not have been obvious to obtain the claimed and demonstrated bulking effect in paper filled with a natural CaCO_3 .

Claims 29, 34, 36, 46, 47, 49, 61, 65 and 66: Since the claimed compositions are not anticipated or made obvious over the cited prior art, processes of using the compositions and products comprising the compositions are similarly not anticipated or obvious. Regarding the product by process claims, the data presented by the Applicant show that paper made using the claimed compositions does have significantly increased bulk, thus the compositions made by the claimed process have a different structure than would be expected by one of ordinary skill in the art for compositions comprising a natural CaCO_3 and would not have been obvious thereover.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DENNIS CORDRAY whose telephone number is (571)272-8244. The examiner can normally be reached on M - F, 7:30 -4:00 PM.
